HARBOR DRIVE STRUCTURE

Neighborhood Context:
This area serves as a passageway between neighborhoods and districts, with pedestrians passing through at grade and drivers passing through both at grade and on elevated structures.

Opportunities
1. Create a highly visible structure
2. Highlight transit over transit crossing (LRT curving over Streetcar alignment)
3. Light rail crossing at grade with Naito Parkway supports future development on adjacent parcels

Challenge
4. Lack of bike and pedestrian connections on structure. Possible future bike and pedestrian connections underneath structure
